## 0 XML processing xtpplib library

Xatapult Content Engineering - <http://www.xatapult.com> - +31 6 53260792

Erik Siegel - [erik@xatapult.com](mailto:erik@xatapult.com)

**xtpplib** is an open source library containing software for processing XML, using languages like XSLT and XProc. It consists of several separate components, all named `xtpplib-*`. Everything can be found on GitHub (<https://github.com/xatapult>).

**xtpplib** consists of the following components:

Component	Description
<a href="#">xtpplib-common</a>	Xatapult XML Library - Common component
<code>xtpplib-xdoc</code>	Xatapult XML Library - xdoc component
<a href="#">xtpplib-webdoc</a>	Xatapult XML Library - Common website + GitHub pages generator software

# 1 Usage

## 1.1 Installing xtpxlib components

To install an **xtpxlib** component you can do one of the following:

- Clone its GitHub repository to some appropriate location on disk. The `master` branch will always contain the latest stable version.
- Or download the latest release zip from its git website (releases page) and unpack it somewhere.

## 1.2 Running xtpxlib components

**xtpxlib** consists mainly of XProc (1.0) pipelines and XSLT (2.0 and 3.0) stylesheets. To run these you'll need:

- To run the XProc pipelines use [XML Calabash](#) Xproc 1.0 processor. This library uses several of its non-standard extensions, another XProc processor is therefore probably not usable.
- To run XSLT stylesheets the [Saxon](#) processor is preferred. In most cases the (open source) HE (Home Edition) version will be sufficient. If not a PE (Professional Edition) license is necessary.
- As an alternative run the software from within the [oXygen XML IDE](#).
