xtpxlib-webdoc is part of the **xtpxlib** library. **xtpxlib** contains software for processing XML, using languages like XSLT and XProc. It consists of several separate components, named `xtpxlib-*`. Everything can be found on GitHub (https://github.com/xatapult). The core component of `xtpxlib` is `xtpxlib-common`. Most components will be accompanied by a GitHub pages documentation site (TBD).
